

Cottrell atmosphere in supersaturated Ta(Lu): conserved Kawasaki MC vs. mean-field theory

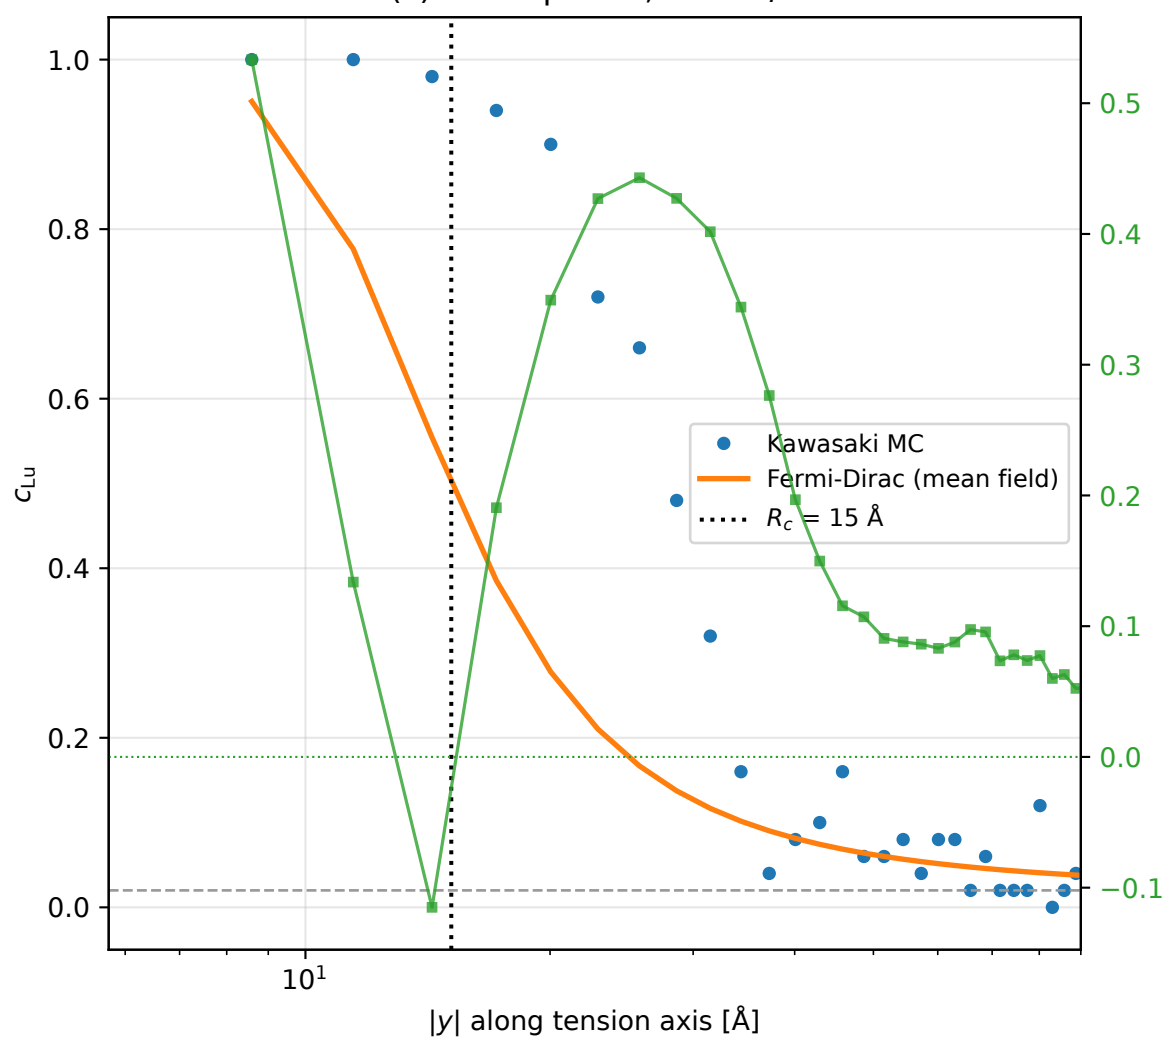

(a) $U_{\text{disl}} = A \sin \theta / r$ [eV]

(b) MC $\langle c_{\text{Lu}} \rangle$, $T=600$ K, $c_0=0.02$

(c) radial profile, $\theta = -\pi/2$

(d) Warren-Cowley α_1 (7×7 window)
green: MC $c_{\text{Lu}} = 0.5$ contour
